

## Google Invisible reCaptcha

**Protect your store from fraud and abuse  
by adding reCaptcha to every form**

### **reCaptcha V2**

reCaptcha v2 reveals bots by asking users to tick the 'I am not a robot' checkbox or solve an image recognition task. You can configure the security preference setting from 'easiest for users' to 'most secure' to define how often challenge solving will be required.

### **reCaptcha V3**

reCaptcha v3 returns the score of each request based on user behavior. The lower the score, the more likely a user will be indicated as a bot and get a notification about it. You can set the score acceptable for your store and custom error message in the configuration of the extension.

## Improve your website user experience

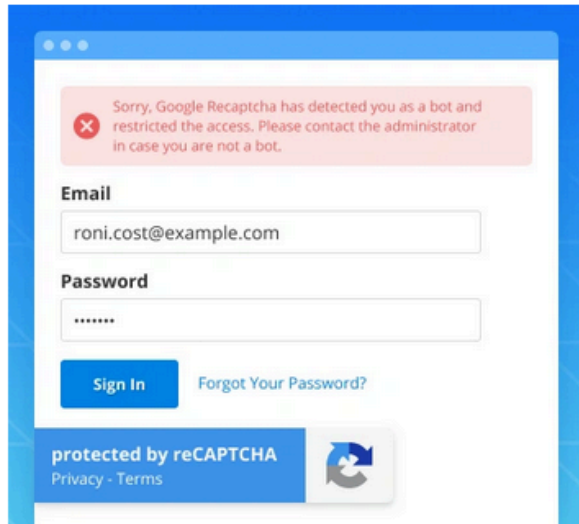

Make your visitors satisfied with their shopping experience and protect forms on your website with Invisible reCaptcha. By setting up a captcha score, the store admin can precisely define requests that will be considered suspicious. This way, the real shoppers won't need to solve any tests when browsing your store.

## Show reCaptcha only for guest users

Most customers find reCaptcha annoying. Don't try the patience of your registered clients and display a captcha only for guest visitors. This will help you to take up two challenges at once: you'll protect your store website and won't lose customers. Also, you can make up an IP whitelist to mark specific traffic as trustworthy. Invisible Captcha will be disabled for the IP addresses specified in the list.

A screenshot of a product review form. It has three input fields: 'Nickname' with the value 'John White', 'Summary' with the value 'Nice but fades quickly', and 'Form Title' with a longer text entry. Below the fields is a 'Submit Review' button with a hand cursor icon. In the bottom right corner, there is a 'Privacy - Terms' link with a circular arrow icon.

A screenshot of a login form. At the top, there is a red error message box that says: 'Sorry, Google Recaptcha has detected you as a bot and restricted the access. Please contact the administrator in case you are not a bot.' Below this are fields for 'Email' (with the value 'roni.cost@example.com') and 'Password' (with masked characters). There is a 'Sign In' button and a 'Forgot Your Password?' link. At the bottom left, there is a blue badge that says 'protected by reCAPTCHA' with a 'Privacy - Terms' link and a reCaptcha logo.

## Full support of the reCaptcha v3

Google Invisible reCaptcha doesn't push your customers to solve quizzes if a session seems to be unsuspecting. The reCaptcha test appears only in case of suspicious requests. Admin can incorporate the necessary reCaptcha version that fits the website's needs the best.

## Display custom reCaptcha message

Sometimes even real shoppers don't pass the reCaptcha v3 test. It happens if they did something to trigger Google spam detection. To avoid the real shoppers' confusion, you can create a user-friendly explanation message about how to act in case of a failed validation test.

## No more spam bots in comments and reviews

You can add Google Invisible reCaptcha to your comment and review forms. You don't need to waste your time on manual spam filtering — let users see only trustworthy content that motivates them to purchase more.

## Invisible reCaptcha on the registration form

Spam at registration forms could drive any admin user mad. By using a reCaptcha option you protect your store from spam bots at both login and registration forms. Also, you can add Magento 2 Captcha to the newsletter form if needed.

## Protect email your communications

As reCaptcha can be implemented in multiple forms, you may also protect your newsletter subscription form. This way you exclude the chance of bot presence in your leads database. Also, enable captcha on the 'Contact Us' page to avoid spam and spend time on real customers.

## Flawless extension integration

Usually, to add reCaptcha to a Magento website you need to make some coding effort. Our extension provides you with a way to easily integrate reCaptcha code into your website. You need just to obtain site and secret keys for reCaptcha in the Admin panel in Google and enter its values in the appropriate extension settings.

## Learn more about Invisible reCaptcha from Google

For more information, please, visit the official [Google reCAPTCHA](#) page .

Here you can also create the security API codes to implement the reCaptcha on your website with our Magento 2 captcha extension.

## FAQ

- **Are Yash extensions compatible with all themes and extensions by other vendors?**

Yash extensions work with all plugins we issued and with most 3rd-party plugins. If you come across a Magento 2 compatibility issue with any third-party module, we'll definitely try to help you.

Please [contact us](#) if you face any technical difficulties to receive help from our experts. Please perform a backup before starting the installation process to be sure that nothing can provoke a conflict.

- **Will I get free support and updates?**

Yes, you can use installation and configuration services that are available as the part of your product subscriptions.

- **Can I test an Yash extension on a staging site before transferring it to a live one?**

Yes, you can install any Yash extension on a test site and configure all the settings there before doing it on your live store.

- **How can I get a refund?**

Yash offers to its Customers a thirty (30) day money-back guarantee for the Software. In case the acquired extension didn't meet your expectations, our support team is always ready to help you. Fees for support subscriptions and any services provided by Yash are not refundable.

To get a full or partial refund of your order, Please [contact us](#) . Our manager will contact you within 24 working hours after the request.

- **If I need additional features to be added to an Yash extension, how can I ask for it?**

To leave your feature request, Please [Contact us](#) and leave your feature request in the email .

- **Magento 2 Yash extensions installation**

Each Yash extension package is provided with the extension files, installation & setup guides, and a license agreement. Some extensions include import files examples as well. So how to install our Magento extension?

What is the plugin installation method in Magento 2? There are 2 two ways of installing an extension in Magento 2. Let's consider them both.

## **Method 1. Via Composer (recommended)**

The first option on how to install Magento 2 extension manually is via Composer. You can freely install, update, and remove Magento 2 extensions using Composer.

## **Method 2. How to install Magento 2 extension from zip file?**

For the installation, please prepare Magento admin panel and SSH access details.

- unpack the .zip file you've downloaded;
- connect to the server where the website source folder is located with FTP/SFTP client (WinSCP, Filezilla, Cyberduck, etc);
- go to upload > app and upload the files from the app folder to the root app folder of your Magento website using 'Merge' upload mode. This way, your FTP/SFTP client will only add new files;
- connect to your Magento directory with SSH;
- run the commands:
  - **php bin/magento setup:upgrade** - to install the extension.
  - **php bin/magento setup:di:compile** - to compile the code.
  - **php bin/magento setup:static-content:deploy** - to deploy static view files.
